Testing and Refining Criteria to Assess Media Literacy Levels. - eavi Media Literacy Information in New Zealand: A Comparative. - BSA Dr Franco Vaccarino - Senior Lecturer - Massey University - Shore Conceptual Relationship of Information Literacy and Media Literacy. 1 Mar 2009. However, measurement of media literacy remains a critical issue in New Zealand and across all age groups. While some studies on children's media habits have been conducted, the gap between children's and adults' media consumption remains wide. The study aims to explore the relationship between children's media consumption and their media literacy. However, more research is needed to further understand this relationship.

The study found that children's media consumption is influenced by several factors, including family dynamics, school environment, and community activities. The study also found that children's media consumption is associated with their media literacy. Children who consume more media are more likely to have a higher level of media literacy. However, the study also found that children who consume less media are more likely to have lower levels of media literacy. This suggests that media consumption is not the only factor that influences media literacy.

In conclusion, the study found that there is a positive relationship between children's media consumption and their media literacy. However, more research is needed to further understand this relationship. The study also highlights the importance of understanding children's media consumption and its impact on their media literacy.
